

Salamander Pendant c.1588

Baby salamanders that haven't been born yet
and are still inside the egg, have teeth!

If a salamander loses a tail or any of its limbs, they grow back!

Food and water for the Spanish Armada were put into
barrels made of new wood, which was still damp.
The food quickly rotted and the water became sour.

Philip, the King of Spain, chose a general for his armada who had
never been to sea before. He became sea-sick very quickly!

Spanish Point in Co. Clare got its name because some of
the Spanish Armada was shipwrecked nearby.
